

SlideRocket Portable Presentation for Windows

SlideRocket has developed a new offline player that does not require Internet access and can be burned to a CD, saved to a thumb drive or accessed from a computer hard drive. This new feature is called the **SlideRocket Portable Presentation**. Currently, the player is only PC compatible, but a Mac version is being developed. The Desktop Presenter is still available for both Mac and PC. For more information, visit:

Exporting a Portable Presentation

1. Click on the **Presentations** tab
2. Select a presentation
3. Click on **Export**
4. Click on **SlideRocket Portable Presentation (Windows only)**

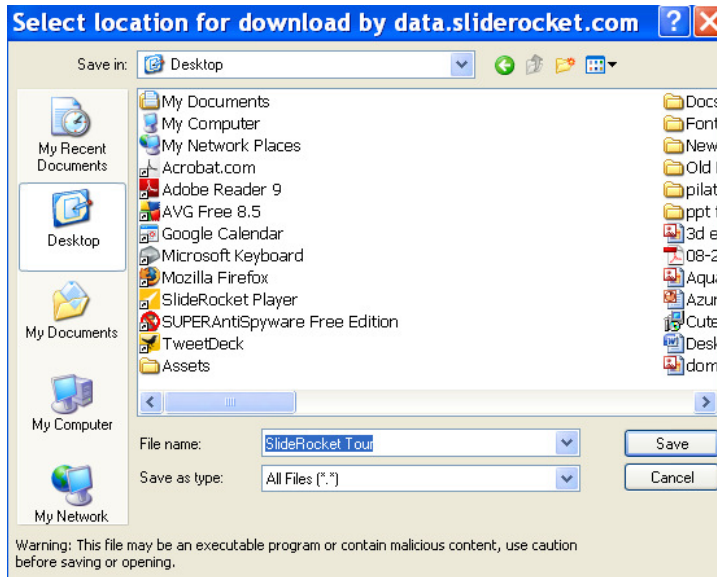

5. Click **OK** when export is complete

6. Select a location to save the **Portable Presentation**
7. Enter a **File Name**

8. Click **Save**

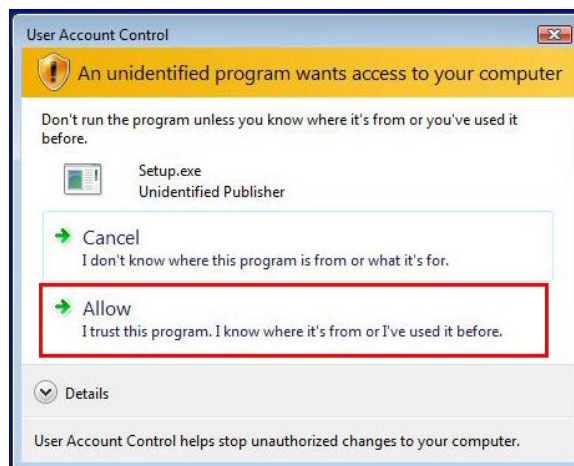

Playing a Portable Presentation

Once the presentation and player are exported, it can be opened and **played**.

1. Find the **Portable Presentation file** and double-click on it

- Vista users will need to click **Allow**

2. Click **Run**

3. Once the SlideRocket Portable Presenter opens, click the **play** button

4. The **navigation bar** across the bottom acts the same as the SlideRocket online player and Desktop Presenter

-  Returns presentation to the beginning
-  Advances to next slide
-  Returns to previous slide
-  Slide 1 of 16 Allows the viewer to jump forward or backward to a specific slide in the presentation
-  Adjusts audio
-  Opens window to email a link to the presentation, embed the presentation or send a link to Twitter
-  Allows presentation to be printed
-  Expands presentation to a full screen or closes out of full screen. Hitting the “F” key will also expand the presentation to full screen and return it to traditional viewing.
