

## Publish to a Link

**Publishing a presentation** allows the user to share a presentation via a link. The presentation can be viewed by both SlideRocket members and non-members by simply clicking on the link. The presentation will be the most up-to-date version because any saved changes are automatically updated to the player. Since SlideRocket is a Flash-based application the link will play the same on a PC, Mac or Linux computer and any custom fonts in the presentation will be displayed without the viewer having to install the font.

1. Click on the **Presentations** tab
2. Click on the desired presentation once and the **Publish** button will appear under it
3. Or in the editor click on the **Share** button
4. Click on the **Publish** button

5. Check **Make this presentation public**
  - a. **Anyone can view this presentation at the following URL:** Copies a link to the presentation onto your clipboard to share with others

- b. **Copy the following HTML to embed this presentation into your website or blog:**  
Provides HTML code to embed presentation directly into a website

6. Turn on **Statistics**:
- Check **Track Statistics for people viewing this presentation**: Allows SlideRocket to track the statistics of who views the presentation, how long it was viewed, which slides they looked at and how many times this presentation is viewed
7. Set **Restrictions**: These are all optional choices to protect the embedded presentation
- Require password to view**: Sets a password to view this presentation
  - Allow viewers to print this presentation**: Allows viewers to print
  - Allow viewers to share/embed this presentation**: Sets whether viewers of this presentation are allowed to email it or embed it into their own website
  - Allow fullscreen playback**: Sets whether viewers of this presentation can toggle to fullscreen playback
  - Maximum playback resolution**: Sets the maximum resolution that the presentation can be viewed. This setting will prevent presentations from being scaled larger than the actual resolution during playback
8. **Player Skinning**: Sets how the embedded presentation will be displayed
- Hide SlideRocket branding**: Sets whether the SlideRocket branding should appear above the play button
  - Hide navigation bar**: Sets whether the SlideRocket navigation bar should appear in the player
  - Start playback automatically**: Sets whether the presentation will start automatically once loaded or wait for the user to click to start

1. **Start presentation full screen:** Sets whether the presentation will start fullscreen. This option is only available when start playing after clicked is selected
- d. **Start playing automatically:** Sets whether the presentation will start automatically once loaded
- e. **Background Color:** Sets the background and boarder color of the player

**ADVANCED NOTE:** Presentations set to loop and auto advance will not have statistics recorded, even if the box is checked. For more information about securely distributing presentations, view the guide for **Invitations** at: <http://www.sliderocket.com/support/documentation.html>

## Navigations in the Player

The **navigation bar** across the bottom of the SlideRocket embedded player has the following options:

-  Returns presentation to the beginning
-  Advances to next slide
-  Returns to previous slide
-  Allows the viewer to jump forward or backward to a specific slide in the presentation
-  Adjusts audio
-  Opens window to email a link to the presentation, embed the presentation or send a link to Twitter
-  Allows presentation to be printed or exported
-  Expands presentation to a fullscreen or closes out of fullscreen
